FareGo **FB|30**

**Designed for simplicity,
durability and longevity.**

Update your transit system with the next level of farebox technology. Provide faster boarding for every passenger.

Farebox FareGo FB|30

Simple to use, easy to maintain. Make boarding the bus stress free for your passengers with the new FareGo FB|30.

Riders enjoy a more intuitive interface. Once they pay the default fare and the full payment is validated, the farebox automatically prompts the next passenger. The result? Significantly reduced bus dwell times.

Proudly manufactured in Lowell, MA:

Our commitment to the Buy America Act demonstrates our dedication to local manufacturing. Our farebox is proudly made in America, ensuring high quality craftsmanship that supports the local economy.

Next generation farebox

Designed for **simplicity,**
durability, longevity.

Designed for simplicity

Make boarding the bus as easy and stress-free as possible. The FareGo FB|30 customer interface provides a straight-forward experience for riders and operators alike.

Designed for durability

The intelligently designed, long-lasting FareGo FB|30 requires fewer repairs and replacements. It also fits alongside previously installed handrails and has a non-reflective, operator-friendly surface.

Designed for longevity

The FareGo FB|30 is manufactured with high-quality materials and modular components to ensure it's long-lasting and easy to maintain.

Next generation farebox **FareGo FB|30**

Move your fare collection system to the next level.

Intuitive design

Our new farebox guides your riders with large, bright, readable options. It also accepts bill and coin fares at a high speed with fewer rejections.

Robust design

Designed for tough conditions like vibration, dust, washing or temperature changes, our farebox is very much built to last.

Faster boarding

An improved passenger experience is a good thing for everyone. More intuitive graphics and smarter fare receiving means passengers get going quickly so operators can, too.

Reduced maintenance

To simplify maintenance and minimize down time, units are equipped with a wide range of computerized self diagnostics and are built modularly for easy swaps in and out.

Passenger interface: Simplified

The interface and metal hood allow passengers to board and pay without difficulty or delay.

Bill insertion: solved

It accepts bills – even wet and rough ones – at a higher speed, with lower rejection rates.

Coin slot: improved

A smarter, illuminated coin path reduces jams, and an additional coin slot ensures flawless operation.

Passengers: guided

Illuminated arrows indicate options available for the passenger to eliminate questions and streamline boarding.

Sensors: upgraded

Sensors regulate temperatures to initiate a warm-up or cool-down process to optimize performance. Sensors measure movement, including acceleration, extreme shock and vibration. Brightness sensor can be used to adjust both display and indicators to improve visibility.

Fast & easy payment

FareGo FB|30

An improved passenger interface for reduced operator interaction. Information on the large color passenger display assists passengers with:

- Clear transaction status updates (amount due, amount paid, transaction complete)
- Illuminated indicators and tactile buttons
- Well-lit, rugged coin and bill insertion
- High-quality audio feedback speakers
- Always-Accepting Mode for decreased passenger dwell delays

Secured **cash handling**

Your cash is safely stored with our proven vaulting equipment.

We didn't change our chashbox model for a reason: it works and keeps working

- Highly durable and reliable construction
- Separate bill and coin compartments
- 800-bill storage capacity
- Coin volume greater than 50% of the bill volume
- Machine-readable ID

Seamless integration

Your existing account-based ticketing or card-based system easily pairs with the FareGo FB|30 for a smarter, simpler, complete fare collection solution.

Farebox integration

Integration with CAD / AVL system (option) and validators

- Integrated functions (including central point login)
- Primary Log On and Log Off is handled through the CAD / AVL system
- Seamless integration with on-board systems (such as fare media validators and USB port)

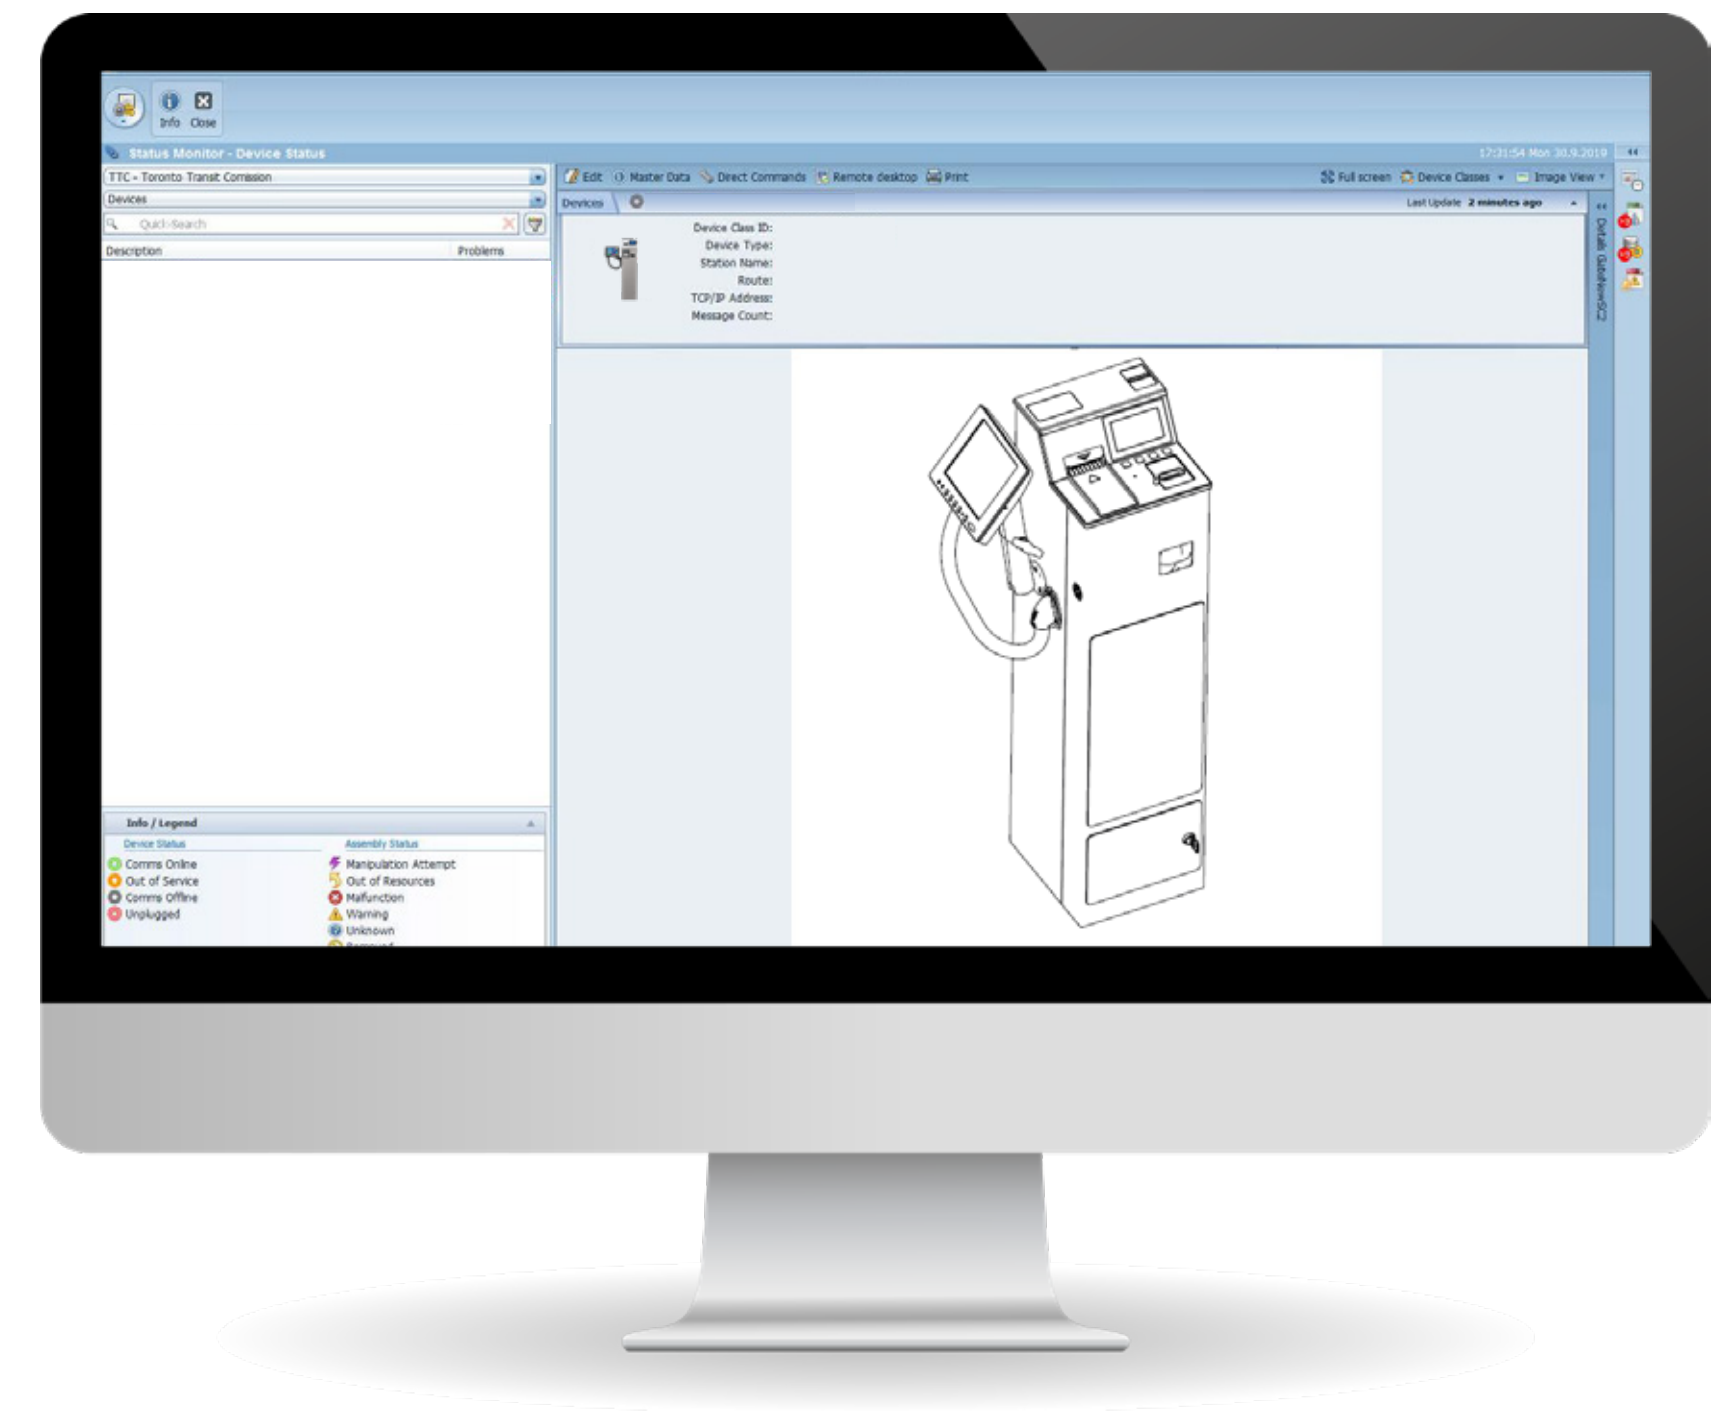

Manage your FareGo FB|30 device fleet centrally

Our proven device management system is the central access to your fare collection devices.

It simplifies the management of the entire device fleet and makes typical tasks, such as master data management or tariff maintenance, easier.

FareGo Data device management

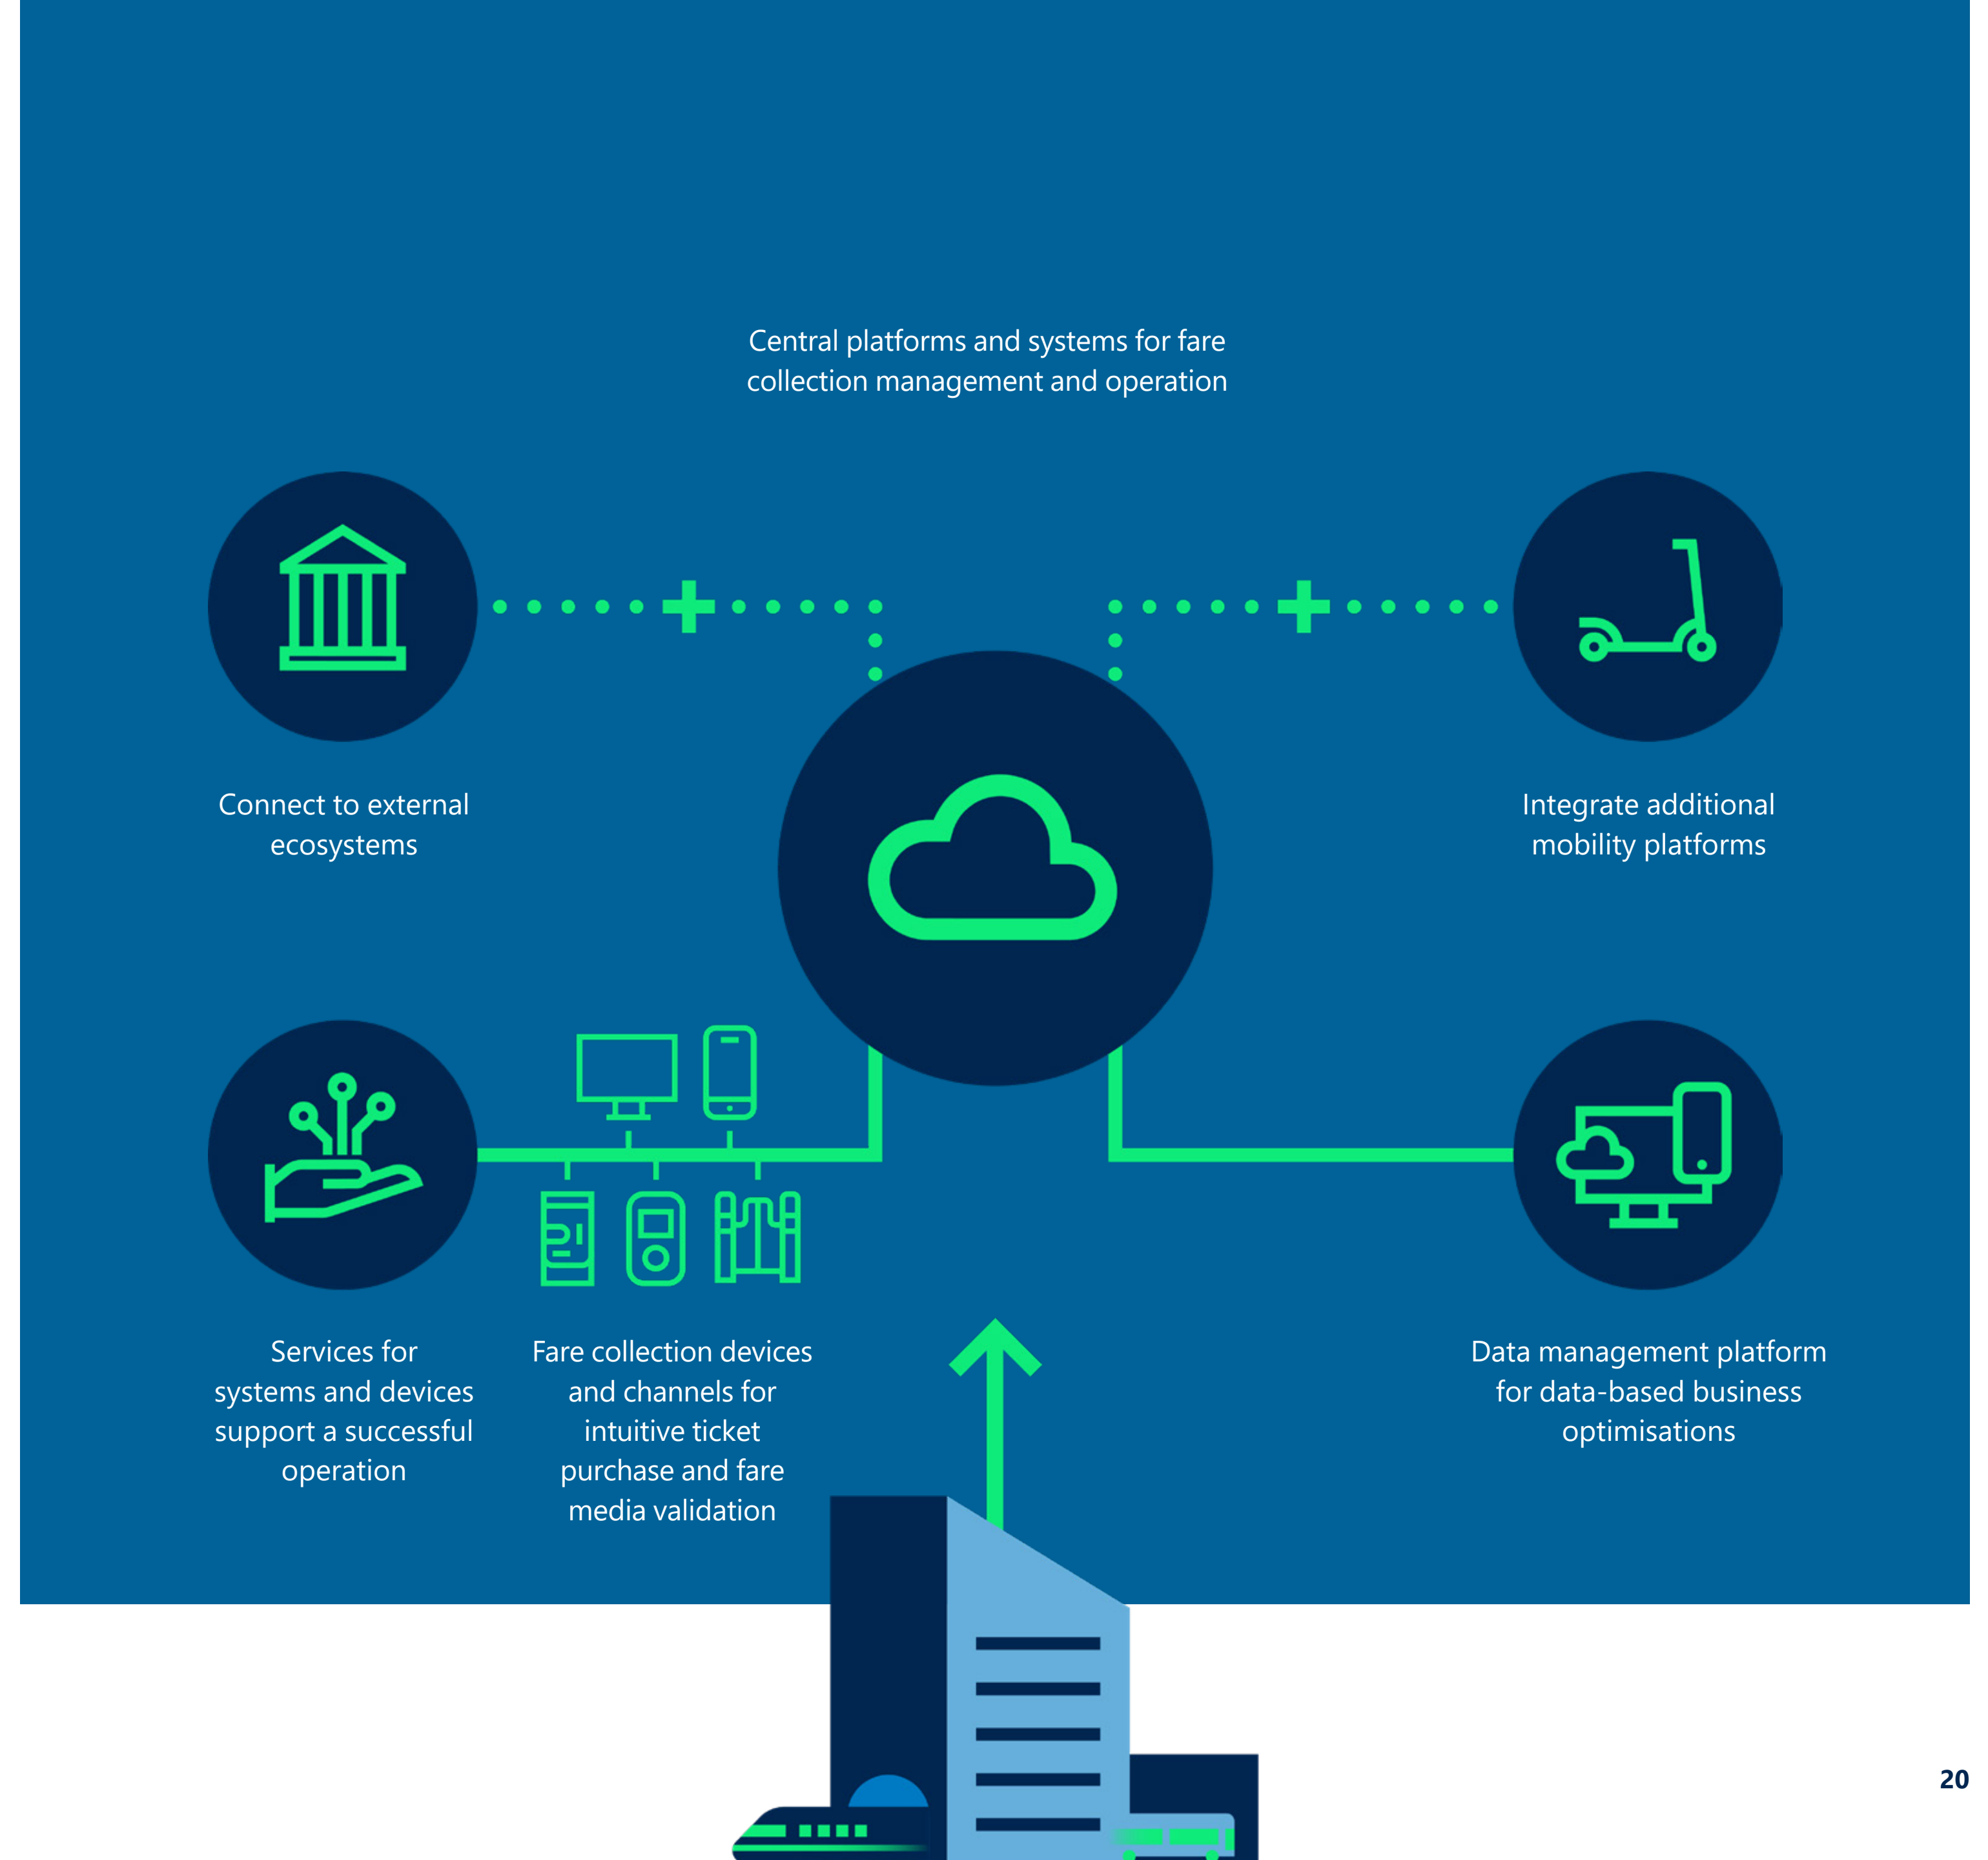

- Administration of devices, operational data, version
- Tariff maintenance
- Layout studio for ticket layouts
- Frontend designer for sales application
- Remote direct commands

Our fare collection systems

Built for you. Delights your passengers.

Our FareGo portfolio is modular, scalable, and open. It allows you to build whatever system you want, and adapt it as technology evolves, operations expand, and user expectations change. Choose the central fare collection platform for an account-based ticketing or card-centric system. Add the sales and validation channels that match your passenger services. Connect the data management platform to optimize your operations. Expand your own resources by using our system and device services. Integrate external systems or platforms to build a holistic network.

Scheidt & Bachmann group

Millions of people around the world use our systems every day.

Our digital management systems can be found wherever people use modern mobility infrastructure: When they park their car at a shopping mall in Nairobi or take the bus in Toronto; when they refuel in Berlin or travel Europe by train. These are all touchpoints with Scheidt & Bachmann technology.

Our divisions:

- Fare Collection Systems
- Fuel Retail Solutions
- Parking Solutions
- Signalling Systems

Fare Collection Systems

We are a leading provider of system solutions that make using public transport easy.

In partnership with transport operators around the world, we are committed to making travel as pleasant and stress-free as possible for passengers. We combine the innovative products and services of our brand FareGo with the unique expertise of our international team. The result is reliable, intuitive, and forward-looking fare collection systems that help make sustainable mobility accessible to everyone.
